MARCEGAGLIA
BALTICS

Marcegaglia Baltics was born in 2023
from a professionals team with a wide experience
in the steel business starting from 1992.

The manufacturing plant in Riga, Latvia is dedicated
to the production of **carbon steel sheets**
and **strips** for a wide range of applications.
It currently hosts **4 flat steel processing lines**
(2 are for cut-to-length and 2 for slitting)
as well as **packaging lines** for sheets and strips.
Marcegaglia Baltics also owns **2 warehousing centers**
in Riga, supported by partner warehouses.

SUSTAINABILITY
MARCEGAGLIA'S COMMITMENT

Every day, Marcegaglia expresses a distinctive expertise that, besides the unique competence and productive know-how, is translated into a constant attention to sustainability.

Within the Marcegaglia group sustainability vision, **Marcegaglia Baltics** has always paid particular attention to waste reduction thanks to specific policies in the management of processes and to **epd certifications** achieved.

MARCEGAGLIA
FOS-SUR-MER

A **STRATEGIC** INTEGRATION FOR SUSTAINABLE GROWTH

In 2024, Fos-sur-Mer became part of the Marcegaglia group, enabling it to meet around **30% of its carbon steel requirements** while remaining committed to **green and sustainable production practices**, thus better serving its clients.

Utilizing advanced technologies and optimizing processes, the plant strengthens its capabilities and has gained recognition as a **Project of Major National Interest (PINM** - Projet d'Intérêt National Majeur) from the French government, highlighting its significance.

LEADING THE STEEL INDUSTRY

The project for the Fos-sur-Mer plant
will significantly increase production.
In addition to the current **150-200 thousand tons/year from the ingot route**, Phase 1 will add **1.8-2 million tons/year of hot rolled coils**.
In Phase 2, total production is expected to reach around **2.8 million tons/year of hot rolled coils**, bringing the **overall production capacity to 3 million tons**.

A **VISION** FOR THE FUTURE

Our site will be transformed with a focus on sustainability and energy efficiency, producing steel from scrap and low-emission direct reduced iron. Hot rolled coils production is scheduled to start by 2029.

INVESTING IN A **GREENER TOMORROW**

Producing steel from scrap and **"green DRI"** targets an **80% reduction in greenhouse gas emissions** compared to traditional methods, highlighting dedication to the environment and a sustainable future.

Additionally, Marcegaglia supports the **GravitHy** project, which will establish a low-carbon iron plant in Fos-sur-Mer to produce Direct Reduced Iron (DRI) and Hot Briquetted Iron (HBI) to aid its decarbonization efforts.

DIRECT EMISSIONS
SCOPE 1: EAF IS 10 TIMES MORE EFFICIENT THAN BOF

ELECTRICITY
SCOPE 2: MOST FRENCH ELECTRICITY IS FROM NUCLEAR AND HYDROPOWER SOURCES

INDIRECT CO_2
SCOPE 3: EMISSIONS ARE PRIMARILY DRIVEN BY ALLOYING ELEMENTS
